Activities of the European School of Nuclear Medicine

Live Education
The ESNM, as the umbrella organisation for all educational activities of the EANM, ensures the delivery of state of the art education.

Vienna Courses
CME accredited, educational courses, frequently revised and presented by instructors, specialised in the course topic. Classroom style, interactivity, separate case studies on modern software and self-assessment before and after the course are the four columns of success of these courses – come and experience for yourself.

CEE and Outreach Courses
ESNM Courses in CEE Countries have been held since 1995 up to three times per year. They are the “outreach programme” of ESNM for bringing education to Central and Eastern Europe. As of 2014 the ESNM CEE Courses cover full day programmes for Physicians, Physicists and Technologists. Since their inception, 55 CEE Outreach Courses have been held in more than 13 countries.

Clinical Partner Courses
As continuing medical training is becoming ever more important, the ESNM aims to render every assistance and to work very closely together with other associations! Already existing joint courses are the ESNM-ESOR Course on Hybrid Imaging as well as the EANM-ESTRO Course on PET in Radiation Oncology. More to be expected soon!

ESNM E-Learning Contents
Just as the internet itself, there are almost no limits for on-line education, which is why the European School of Nuclear Medicine is focussing on various “educational tools” to continuously educate Nuclear Medicine Specialists 24/7. More than 4,200 users (as per April 1, 2014) already benefitted from the ESNM eLearning contents, and the ESNM Paediatric Dosage Calculator App (iOS and Android) was downloaded more than 4,400 times - increasing every day.

EANMLive - for everyone eager to participate in the EANM congress from afar!
CME and Plenary Sessions that are held at the annual EANM congress can be viewed in real-time FOR FREE. While watching the lectures in your office, your living room, or wherever else you happen to be, you have the opportunity to address questions directly to the lecturers – either via the EANM Live Chat box or via Twitter (#EANMLive).
